AN ONGOING ARTWORK

AN ALGORITHMIC GALLERY

An algorithmically generated gallery exhibiting algorithmically generated art.

PROPORTION PIECE (formerly ALGO/ART) is an open-source generative artwork by Adam Clement, based on the golden ratio. The drawing machine is paired with a virtual gallery tower: each day, a fresh gallery floor exhibits that day's artwork.

CENTRAL QUESTION

How far can the golden ratio govern a composition while its marks remain visibly human?

Editor: southernadd-cmyk.github.io/algoart/

3D gallery: southernadd-cmyk.github.io/algoart/gallery/visit/

The work is drawn procedurally in JavaScript, not by an AI image-generation model. Visitors explore and alter its systems.

THE DRAWING ENGINE

EIGHT SYSTEMS. FIVE MATERIALS.

Deterministic seeds preserve a composition, while different materials make it feel expressive, textured and deliberately imperfect.

EIGHT COMPOSITION SYSTEMS

Orbital Studies	**Golden Trajectories**
Recursive Divisions	Radiant Systems
Connected Fields	Growth Systems
Constructed Forms	Automatic Marks

FIVE MATERIALS

Marker / Tissue & Graphite / Watercolour

Oil Paint / Action Painting

Change seeds and parameters. Inspect golden-ratio overlays. Export PNG or SVG files and browse the evolving daily archive.

Each daily edition adds a new tower floor with paintings, sculptures based on selected portrait works and walkable rooms.

Golden-ratio divisions also influence the tower’s floor plans.

THE VIRTUAL EXHIBITION

WALK THE GROWING TOWER

Visitors enter from outside, choose a gallery day using the lift, walk through architecturally arranged rooms, and view artworks inside an exhibition space that itself grows procedurally.

CREATOR BIOGRAPHY

Adam Clement is a UK-based computing educator and creative coder. His work explores the boundary between mathematical structure, procedural drawing and expressive visual marks.
